

User Profile

Company Name:	Pirelli
Location(s):	Milan, Italy
Industry:	Auto accessories
Operating System:	Windows 2000, Windows NT, HP-UX, Sun Solaris
Network Environment:	NDMP-based with 1 Network Appliance filer
Applications:	File and Print
Databases:	Lotus Notes, Oracle, MS SQL
Backup Requirements:	1-2 TB
Compatibility Requirements:	HP7000 (2 drives, 15 slots)
Reseller:	Enterprise International, Italy
Solution:	NetVault Workgroup with 1 NDMP plugin, 1 library with 16 slot licence

Situation

Pirelli, the worldwide supplier of tyres, cables and systems, needed to actively secure the data residing on their Network Appliance filer based in their Milan office, Italy. Although they currently use a competitive backup product for their enterprise backups of several domains, including Sun Solaris, HP-UX, W2K and NT, this product did not meet the requirements of sufficiently backing up their Network Appliance filer which holds over 1-2TB of files from a range of applications, including Notes, Oracle and MS SQL. Pirelli then searched about for an alternative product and decided on implementing BakBone's NetVault given its outstanding support for NDMP. They are very satisfied with its feature set and particularly welcome the incremental backup functionality which allows them to avoid having to conduct a full backup ever again.

Quote

"We are extremely happy with NetVault. It safeguards our data very well and is really nice and friendly to use"—Davide Pironi, IT Operations Manager, Pirelli
